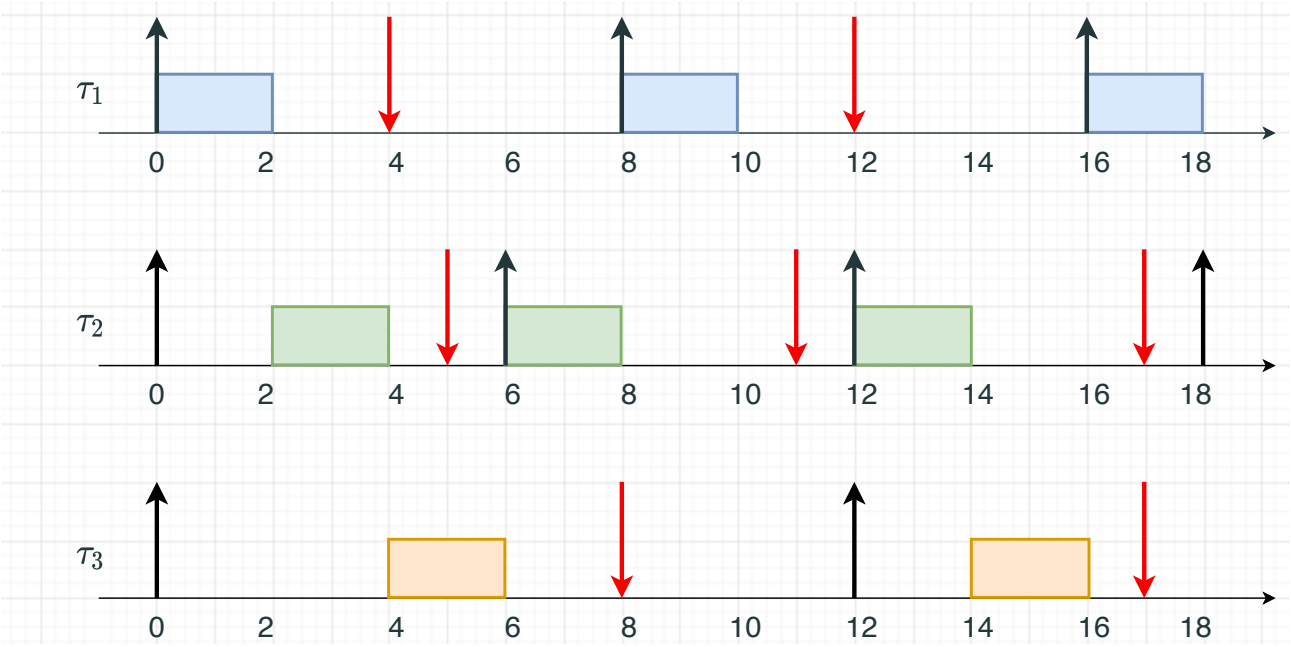
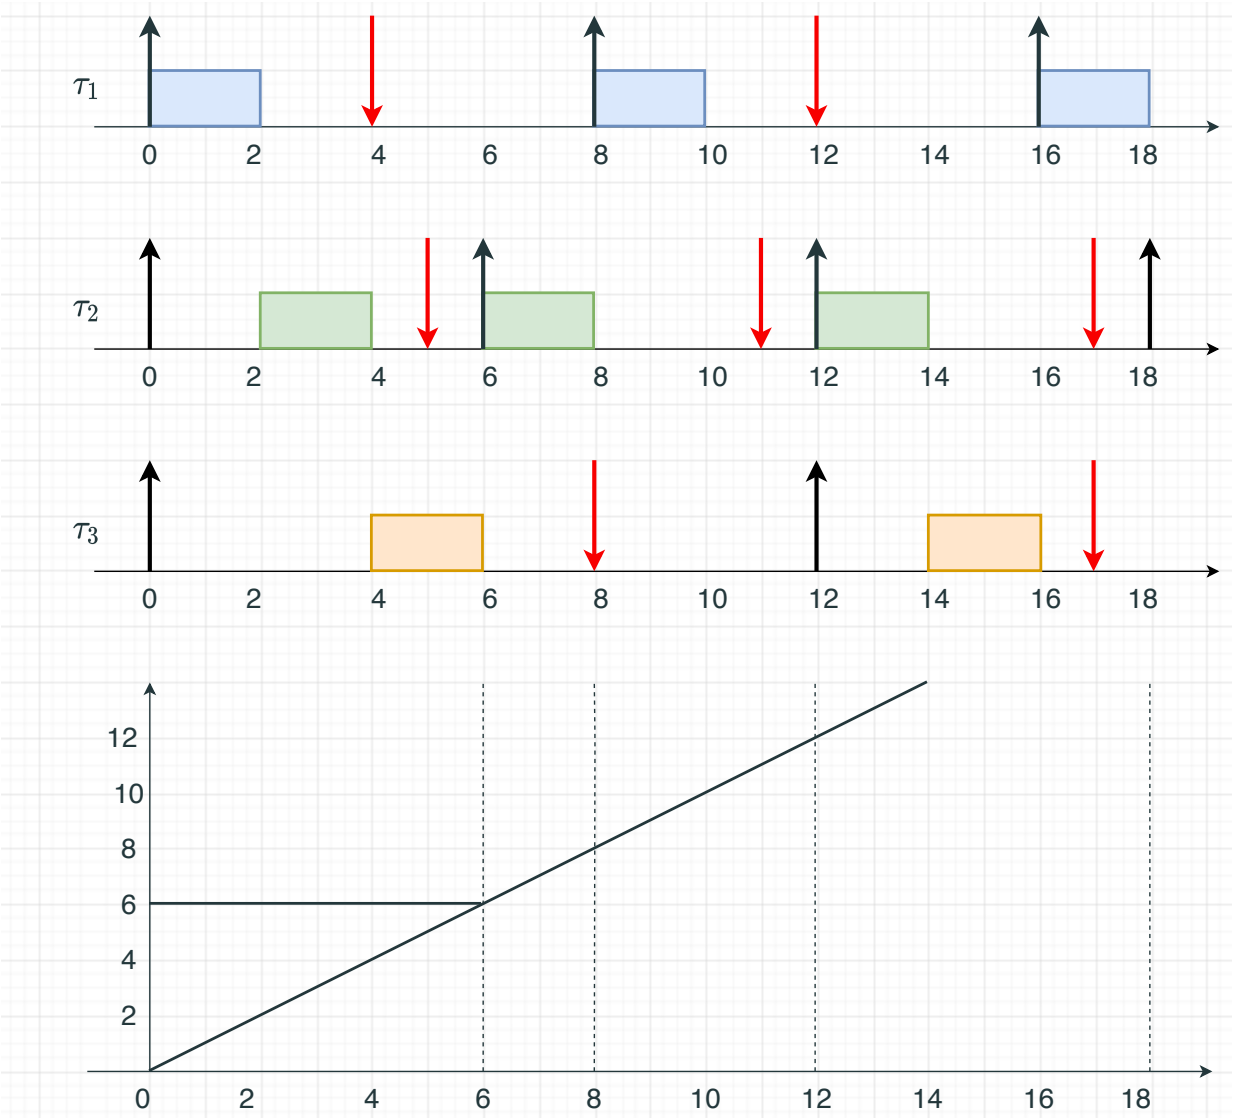
DM: example of a feasible schedule (1/2)

task τ_i	C_i	T_i	D_i
τ_1	2	8	4
τ_2	2	6	5
τ_3	2	12	8



- The response times of τ_1 and τ_2 remain the same: $R_1 = 2 < D_1$, $R_2 = 4 < D_2$
- $R_3^{(0)} = C_1 + C_2 + C_3 = 6 < D_3$; $R_3^{(1)} = C_3 + \lceil R_3^{(0)}/T_1 \rceil C_1 + \lceil R_3^{(0)}/T_2 \rceil C_2 =$
  $= C_3 + C_1 + C_2 = 6 < D_3 \Rightarrow$ the DM schedule is **feasible** for the task set

DM: example of a feasible schedule (2/2)


- The estimated response time increases at each task release: $R_3 = 6$
